

PRESS RELEASE

ORACA Strengthens its CleanTech Sector Coverage, Adding Wind, Solar, Water and Nano

New sector expertise improves future revenue opportunities in US & Pan-Europe

London, 18th September 2009: Independent equity research house, ORACA, announced today that it had added new sub-sectors to its CleanTech sector: Wind, Solar, Water and Nano. The company believes this increased coverage will further strengthen its existing CleanTech expertise, which offers Bio fuels and Nuclear. Christopher Nicholson, Director and Lead Equity Analyst, ORACA said: "Last year when we launched CleanTech, we foresaw strong growth in this sector and we were right. Our decision to expand ORACA's capability reflects the fact that we see this trend continuing. Growing interest in global warming and its implications has seen companies and industries changing the way they produce end products. Investors recognise that a change in business practice driven by global warming and environmental degradation – themselves threats – generates investment opportunities."

Nicholson continued: "ORACA has a reputation for being at the forefront of commercial innovation in financial services. CleanTech is therefore a perfect fit with ORACA and its clients and we anticipate an increased demand for our expertise in this area."
